June 12, 1987

Mr. William A. Burrows
709 Division Street
Glouster City, N.J. 08030

Dear Mr. Burroughs:

Thank you for your reception report. Although your report was pretty general, this will confirm that you were listening to WZAP on Saturday, December 13, 1986. We were playing music and commercial announcements between 4:58 and 5:15 p.m. and Apostolic Voice, a religious program, began at 5:15 p.m. In December WZAP is required to reduce its power at local sun-set which is 5:15 p.m. in that month.

I apologize that that this was your second request, however, to my knowledge, we never received the first report. I hope the following information will be of help to you in completing your report.

WZAP operates on Canadian Clear Frequency 690 khz and until last year was Day-Time, only. We operate on a power of 10,000 kw from local sun-up to sun-set with a 38 year old Raytheon Transmitter. Pre-sunrise and Post-sunset, we operate with a 25 watt LPB transmitter. The antenna is a 280 foot guyed vertical tower and WZAP is non-directional. Studio & transmitter located at 180 Wallace Pike, Bristol, Va. No network affiliation.
Format: Christian
Farthest signal report: Cordinger Strasse 34, Western Germany

Again, thank you for your report & interest.

Sincerely,

Joyce P. Morris (Mrs)
Secretary to
John Faniola
Chief Engineer
